

What GUI version are you running?

No later than **Tuesday, September 7th**, you must be running GUI version 620, Patch level 36 or you will not be able to logon to ISIS HR. Here's how to tell whether your GUI version is correct:

Click on your SAP Logon Pad icon

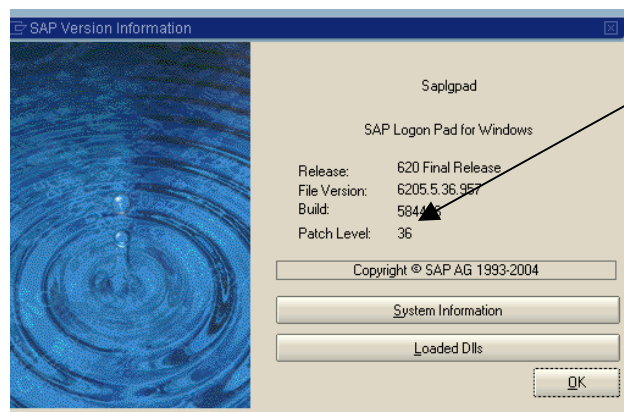

The blue "title bar" of the window displayed should read "SAP Logon Pad 620."

Next, click in the top left corner of the SAP Logon window and then select **About SAP Logon Pad**.

The SAP version information window will display. Verify that your **Patch Level** is 36.

If your Version or Patch Level is incorrect, contact your technical administrator. If unsure of who this is, click or go to <http://www.doa.louisiana.gov/OISContacts/home.cfm> and search by **Responsibility** (Technical ISIS/HR or Technical ISIS/HR/TMS) or **Agency**.
